$src = \{1\}$ (1) $dst = \{2, 3\}$

$src = \{2, 3\}$ (2) (3) $dst = \{4, 5, \cancel{5}, 7\}$

$src = \{4, 5, \cancel{5}, 7\}$ (4) (5) (\cancel{5}) (7) $dst = \{...\}$

$src = \{...\}$ $dst = \{...\}$

Listing 1: SubSelect

```sql
SELECT DISTINCT(dst) FROM team22.relation_facebook WHERE src IN(
    SELECT DISTINCT(dst) FROM team22.relation_facebook WHERE src IN(
        SELECT DISTINCT(dst) FROM team22.relation_facebook WHERE src IN(1)
    )
)
```

Listing 2: Inner Join

```sql
SELECT DISTINCT(rf3.dst)
FROM public.relation_facebook rf1,
public.relation_facebook rf2,
public.relation_facebook rf3
WHERE rf2.src = rf1.dst
AND rf3.src = rf2.dst
AND rf1.src = 765;
```

Listing 3: Stored Procedure

```
CREATE OR REPLACE FUNCTION recursivesearch(tInput integer[], iRecursionDepth integer, sTable text) RETURNS SETOF
